PROFESSIONAL SUMMARY

Software Engineer with 2.5+ years of experience shipping production web applications and AI-powered features with TypeScript, Python, and AWS. Builds generative AI integrations as FastAPI microservices and full stack features across React, Next.js, Node.js, and Go, using AI-assisted development (Claude Code) to deliver faster.

TECHNICAL SKILLS

AI and Automation: Generative AI integration, AI-powered features, FastAPI AI microservices, prompt engineering, AI-assisted development (Claude Code), agentic coding workflows, spec-driven development
Languages: TypeScript, JavaScript, Python, Go, PHP, C#, SQL, HTML, CSS
Frontend: React, Next.js, Angular, Tailwind CSS, Styled Components, Ant Design, PrimeNG, Bootstrap
Backend: Node.js, Nest.js, Express.js, FastAPI, REST APIs, WebSockets, microservices, ASP.NET Web Forms
Databases: MongoDB, MySQL, PostgreSQL, DynamoDB, Redis
Cloud and DevOps: AWS (Lambda, API Gateway, EC2, RDS, S3, SES, CloudWatch, X-Ray, Amplify), Serverless Framework, Docker, Jenkins, GitHub Actions, CI/CD, Vercel, serverless architecture
Payments: Stripe, PayPal, Apple Pay, PayMongo
CMS: Strapi, WordPress (custom plugins, themes), Framer
Tools and Practices: Git, GitHub, Jest, unit testing, Jira, Figma, Agile, Scrum, technical documentation

PROFESSIONAL EXPERIENCE

Freelance AI Engineer | Self-Employed, Remote *October 2026 - Present*

- Design and build custom web applications and AI-powered features end to end for international clients, turning their requirements into technical specifications and working software through deployment and maintenance.
- Deliver full stack solutions with Python, FastAPI, TypeScript, React, Next.js, and AWS, using AI-assisted development (Claude Code, spec-driven agentic workflows) to ship faster.

Associate Software Engineer | Fulcrum Solutions, Remote *January 2026 - September 2026*

- Developed the company website (nyfulcrum.com) with responsive, reusable Next.js, React, TypeScript, and Tailwind CSS components, translating Figma UI/UX designs into maintainable interfaces optimized for page load speed.
- Built and maintained backend APIs in Go on AWS Lambda that supported core business logic.
- Built a Strapi CMS on Amazon EC2 for dynamic content delivery, managed its content workflows and integrations, and upgraded it to the latest Strapi release.
- Maintained WordPress applications on Amazon EC2: deployed over SSH, developed custom PHP functionality, and managed the MySQL databases behind content management and marketing funnels.
- Built features and fixed bugs across a WordPress OSHA training funnel and LMS for healthcare practices (enviromerica.com): registration, auth, routing, PayPal payments, lessons, quizzes, and certification, then removed its payments when billing moved to Stripe.
- Owned manual production deployments for the client's legacy ASP.NET Web Forms (C#) billing portal on Amazon RDS with no CI/CD, and helped set up its Stripe billing.

Freelance Full Stack Developer | Self-Employed, Remote *November 2024 - January 2026*

- Built Island Eats, a food delivery platform serving four roles (admin, store seller, delivery rider, and customer), with role-specific dashboards and real-time order tracking over WebSockets, using React, TypeScript, Ant Design, Node.js, Express.js, and MongoDB.
- Built Hunt Myself, a subscription-based search tool that lets users search Google, YouTube, and Reddit from one place instead of switching between apps, with Python and FastAPI filtering each source into a single clean view, plus user accounts and an admin panel.
- Delivered JobFlow24, a live WordPress job board, in one week: custom PHP and JavaScript plugins (including a CSV job importer with field mapping) and a FastAPI microservice that generates job postings with AI and publishes them into WordPress.

- On Kid Reports (mykidreports.com), a multi-role school management platform with a web app, marketing site, and mobile app (Next.js, Nest.js, MySQL, AWS), built the role-based dashboards and attendance, admissions, in-app chat, reporting, and Stripe billing features, and owned two-way form submissions between parents and schools, including a JotForm-style fillable form builder and its backend.
- Optimized the Starconcord corporate WordPress site (starconcord.com.sg), improving page speed by 30% through asset optimization and growing organic traffic by 20% through on-page SEO.

Junior Developer | Serverless-Secure, Remote *June 2024 - October 2024*

- Delivered full stack features with Node.js, Angular, and TypeScript, ensuring cross-browser compatibility.
- Managed AWS infrastructure for serverless applications, including Lambda, CloudWatch, and X-Ray.
- Replaced Mailgun with AWS SES for transactional and template-driven emails, reducing costs by 15%.
- Enhanced CI/CD pipelines with Jenkins, reducing deployment time by 20%.
- Led a 2-month project management phase, coordinating sprints in Jira and ensuring on-time delivery.

Junior Developer Intern | Serverless-Secure, Remote *March 2024 - May 2024*

- Built serverless full stack applications with Node.js, Angular, TypeScript, and MongoDB.
- Integrated WebSocket messaging and third-party email APIs for real-time communication.
- Optimized database queries and implemented Redis caching, improving response times.
- Wrote unit tests with Jest and created technical documentation and architecture diagrams in draw.io.

PROJECTS

Lead Finder | AI Lead-Finding Tool | TypeScript, Node.js, React, Claude Code, SQLite

- Built a tool that collects leads daily from public feeds, Gmail email alerts (read-only OAuth), and a browser extension, scores each lead against a profile with headless Claude Code, and drafts a tailored message.
- Built a React dashboard on a Hono and SQLite backend to rank leads, edit drafts, and track status, with filtering rules enforced in code and 130+ automated tests.

Bids N Buys | Real-Time Auction Marketplace | Angular, Node.js, AWS Lambda

- Built a real-time bidding platform with Angular 18, PrimeNG, Node.js, AWS Lambda, API Gateway, and DynamoDB.
- Integrated WebSocket bid updates, Redis caching, PayMongo payments, and AI-assisted product listings.

SHE Time Tracker (time-tracker-delta-ashen.vercel.app) | React, TypeScript, Node.js, AWS Lambda

- Built a time tracking and PTO management system with role-based permissions, reporting, and an admin dashboard, on an Express.js and MongoDB backend deployed serverless on AWS Lambda.

SHE Virtual Assistance (shevirtualassistance.com) | Marketing Website | Framer

- Designed and built a responsive, animated marketing site for a virtual assistance startup in Framer (no-code).

EDUCATION

Bachelor of Science in Information Technology
Mondriaan Aura College, Subic Bay Freeport Zone, Zambales, Philippines | Graduated 2023
